In Clinic Education — Screens That Open

The new interface redesign introduces several key improvements to enhance user experience. We've implemented an "webinar section", an "archive section" with better organization, enhanced navigation, and improved content presentation. These updates were specifically designed to elevate the personalized viewing experience and optimize content presentation.

This presentation compares the current interface with the new design, examining mobile experiences across scenarios with and without video content.

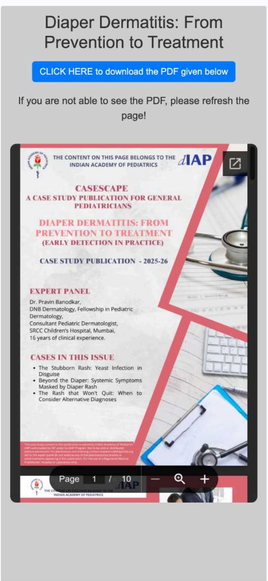
Mobile Experience: Current vs. New

Mobile interfaces demand precision — every pixel, tap target, and word must earn its place. The redesign addresses thumb-reach zones, reduces cognitive load, and streamlines the path to engagement.

Current Mobile Interface

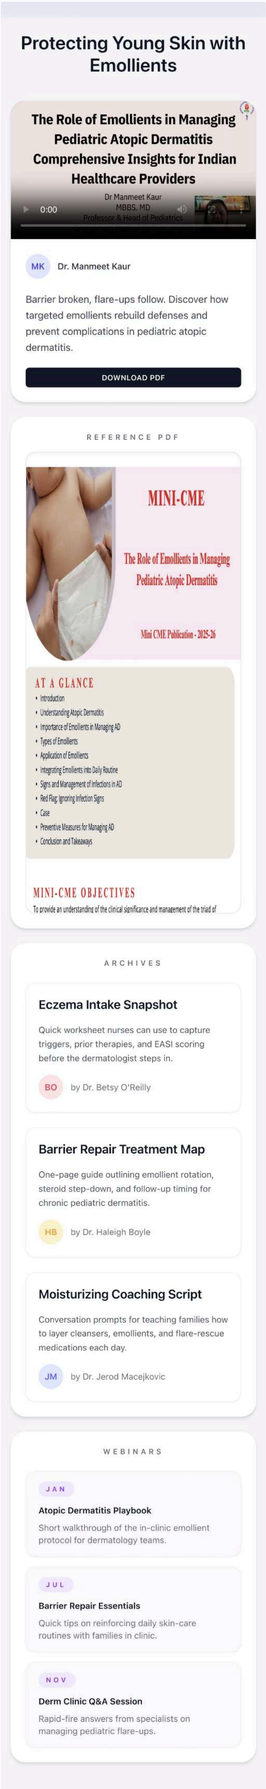
Mobile with video content

Mobile with video content



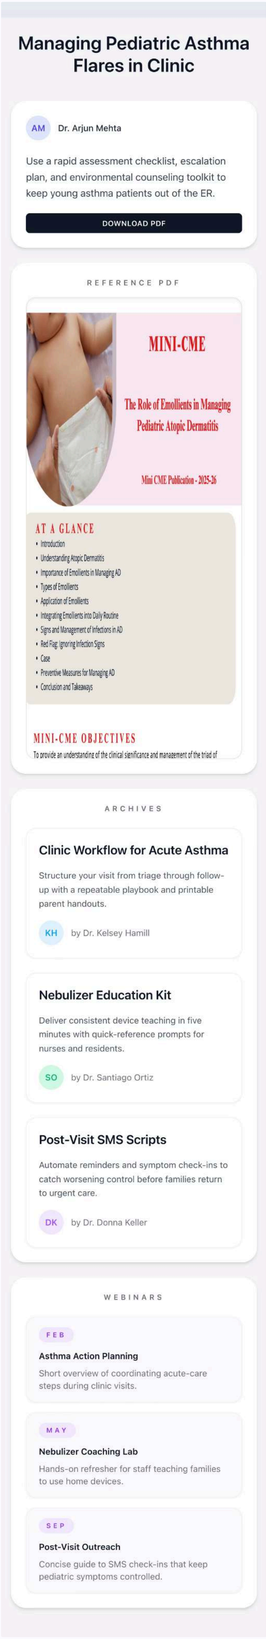
New Mobile Interface

Mobile with video content



New Mobile Interface

Mobile without video content



Key Improvements in the New Mobile Interface Layout:

- **Page Title** - A title that communicates care, not complexity, while maintaining professional credibility. Draws readers in with emotion and purpose, allowing the content to unfold the science naturally. ***(Content team job)**
- **Video Section** - When available, embedded video player with full controls (play/pause, timeline, fullscreen) for content.
- **Content Description** - 1-2 sentences concise, engaging sentences that spark clinical curiosity. Professionally crafted content positioned strategically below video to maintain user engagement and provide immediate clinical relevance. ***(Content team job)**
- **Download PDF Button** - Prominent call-to-action allowing users to download the complete PDF document for offline access.
- **PDF Preview** - Scrollable iframe displaying the actual PDF content, allowing users to preview and navigate through the document directly on mobile.
- **Archives Section** - Quick access to related previous content. Render this section when archives item(pdf) ≥ 1. List up to three most recent items(pdf).
- **Webinar Section** - Content sourced directly from dIAP platform. Webinar links connect to sessions covering the same therapy/topic as the page, ensuring contextual relevance and continuity in learning. ***(Content team job)**

What's New: Unified Content Access

Key Enhancements

Webinar Section

Webinar section featuring pre-uploaded content matching the page title.

Archive Section

Repository of past collateral with filter by topic, making content easily discoverable.

Title & Description

Clear content presentation with prominent titles and detailed descriptions, offering better context and understanding at a glance.
