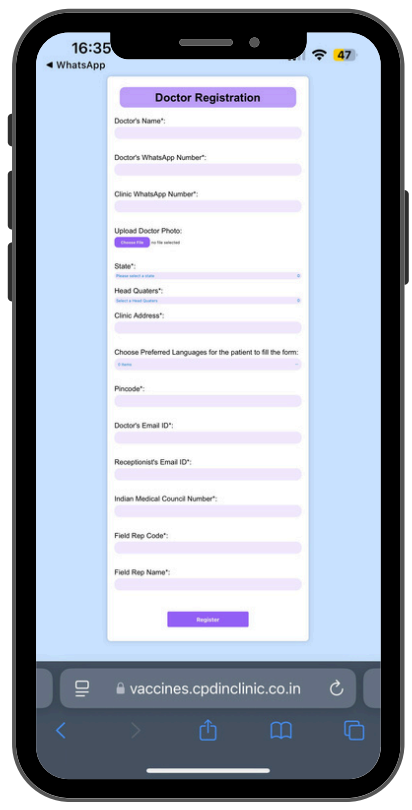
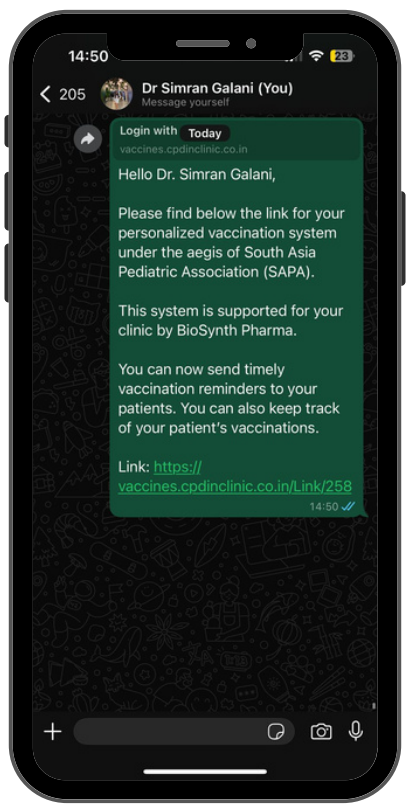
Vaccination System Workflow

Onboarding, Clinic, Patient Interfaces

- The Field Rep completes the clinic white labelling form.
- A pre-populated WhatsApp message appears, and all he needs to do is click “Send.”

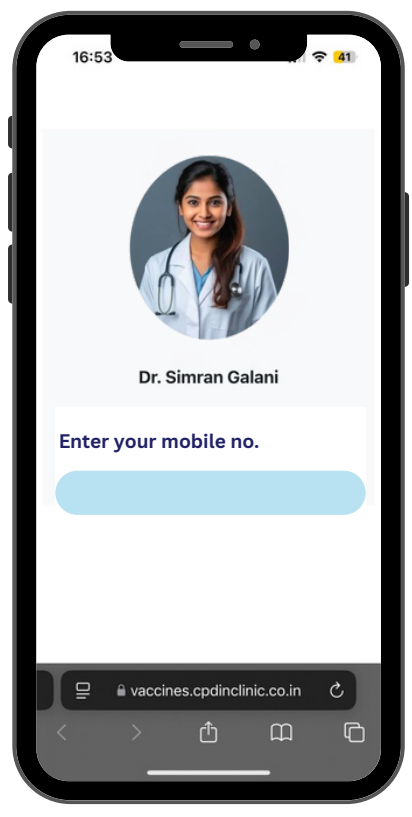
01





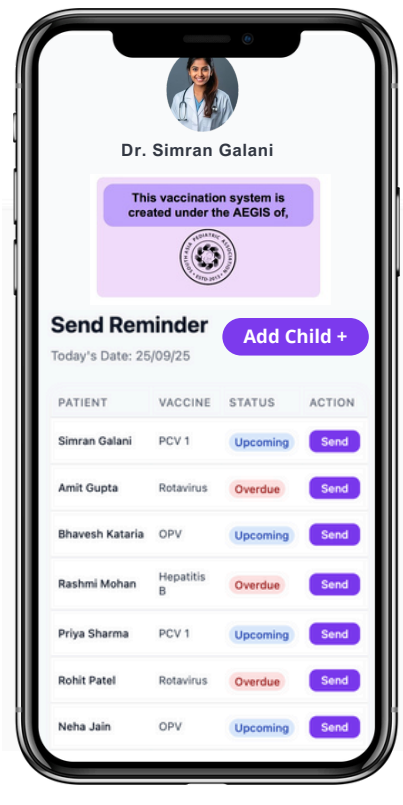
02

A message is received by the Doctor along with the system link.



The doctor activates the system by verifying their mobile number or authentication and agreeing to the terms, a one-time setup process.

03



04

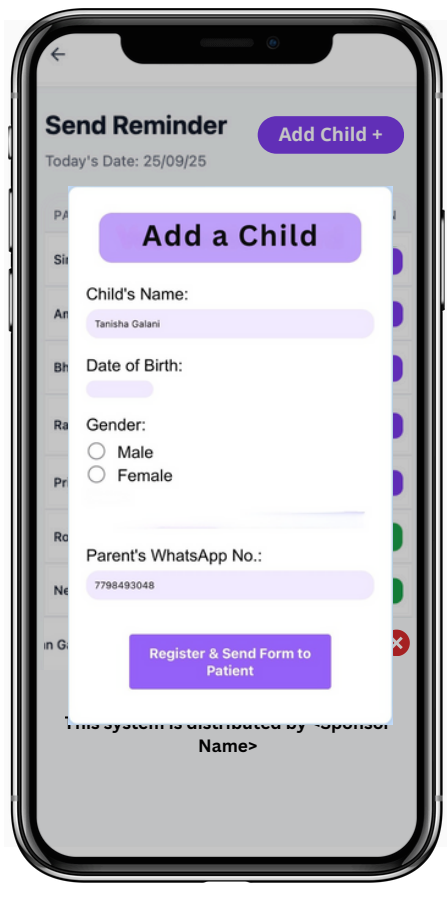
- This is the clinic’s landing page (for the receptionist or doctor), where new children can be added and reminders can be sent.
- Sponsor branding can appear at the bottom of the screen.
- Each morning, the receptionist clicks on “send” to send the reminders scheduled for that day.

To add a child, the receptionist can click on “add” and the she needs to fill:

- Child’s Name
- DOB
- Gender
- Parent’s WhatsApp Number

Registration triggers the creation of a reminder schedule (based on age, gender and IAP immunization schedule) and the patient receives a message from the clinic.

05



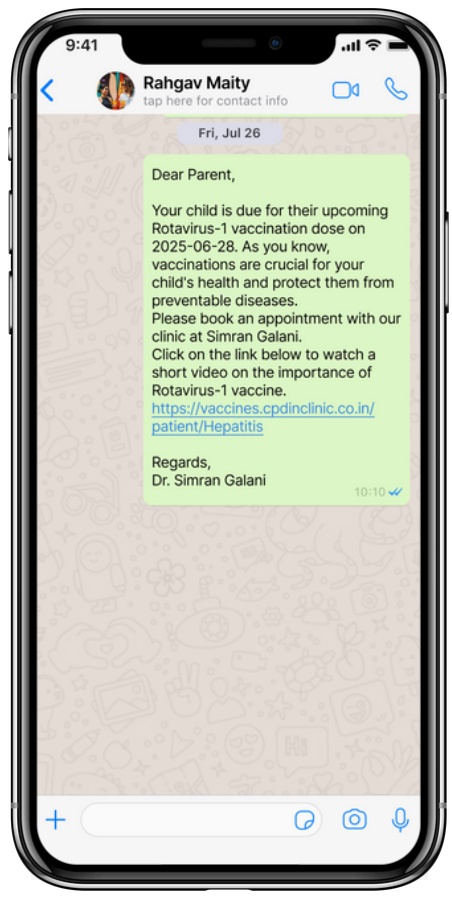
Vaccination System Workflow

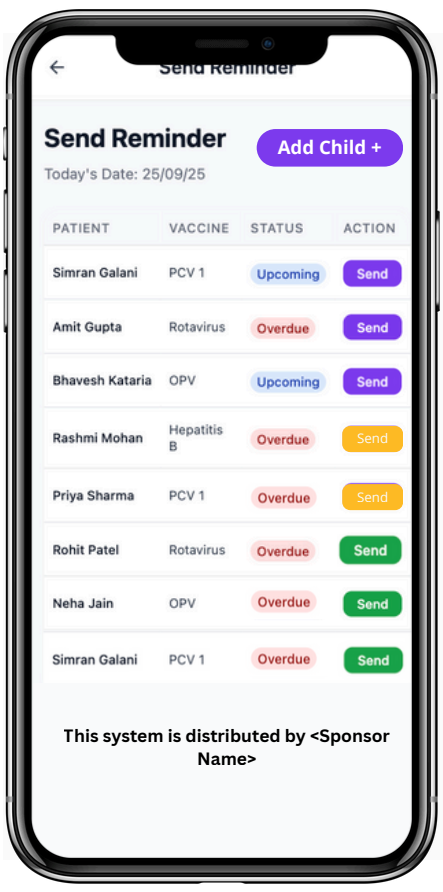
Onboarding, Clinic, Patient Interfaces

When receptionist clicks on “Send”, a pre-polulated message is sent to the patient from her device.

Patient gets a reminder in English + local language along with a patient education video link for that vaccine.

06





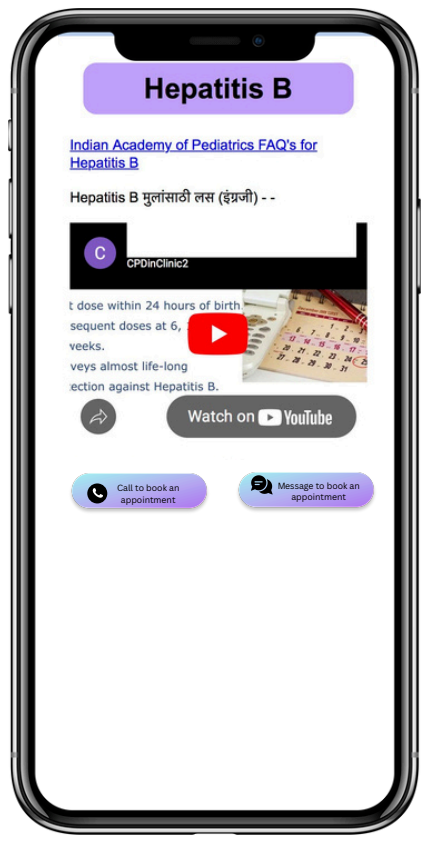
07

The receptionist can send up to three reminders to each patient.

- First reminder: The button is purple. When clicked, it turns yellow and the patient temporarily disappears from the list. The patient reappears after 3 days.
- Second reminder: The button is now yellow. When clicked, it turns green and again disappears from the list for 3 days.
- Third reminder: When the patient reappears, the button is green. After clicking it, the reminder is sent, and the patient permanently disappears from the list (no further reminders).

The patient can view vaccine-specific videos and either book an appointment or call the clinic.

08



09

Selecting “Book an Appointment” generates a pre-filled WhatsApp message from the patient to the clinic.

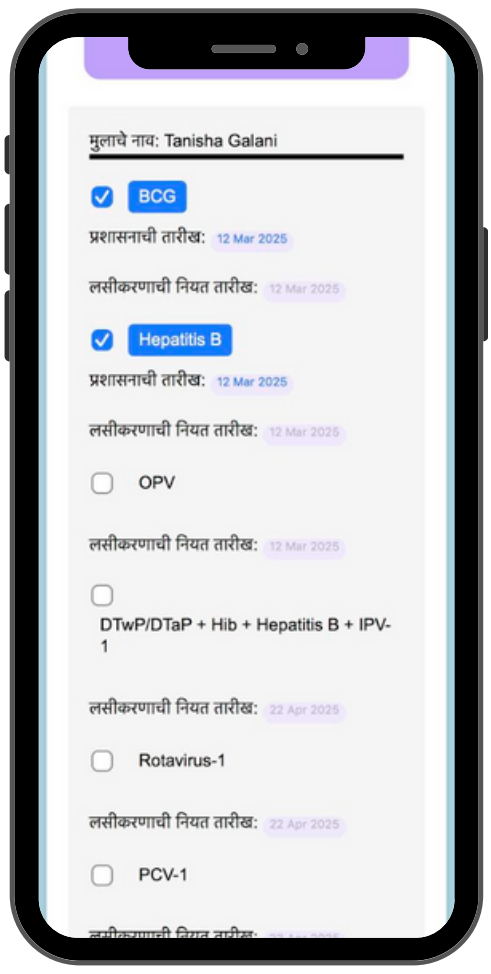
10

If the patient has entered the dates when a vaccination was given, the reminder due dates for the booster doses are automatically recalculated by the system.

Record-keeping by patients

When a patient is added by the clinic, the parent receives a WhatsApp message with a link to the vaccination records.

01



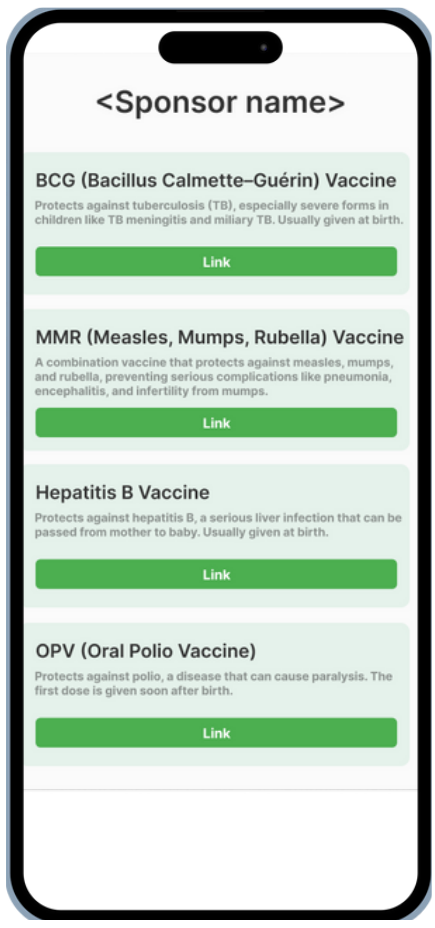
02

The parent can click on the link and update the vaccinations which have been given to the child.

CME (Doctor Education)

01

The CME module has been fully integrated into the Field Rep Flow. Field representatives can now share CME content via the collateral-sharing system on WhatsApp, which directs doctors to a dedicated page containing all vaccination-related videos.



02

Field representatives can also distribute CME content through a personalized, branded QR code for each doctor, which the doctor can scan to access the CMEs directly.
